Breeding Solanaceae Fruit:
EGGPLANT, PEPPER AND TOMATO

LAURA TOPPINO

Dr. Laura Toppino is a researcher at CREA-GB involved in eggplant breeding, QTL mapping and functional characterization of genes of interest in eggplant. Her skills include development of mapping populations, introgression lines and breeding lines, the development of molecular markers, and the mapping, gene expression analysis and functional characterization of genes of interest. She's also an expert in the genotypic and phenotypic characterization of eggplant, in-vitro techniques of regeneration, genetic transformation, propagation and anther culture.
